

**Project:**

Waterproofing a steel standing seam roof

**Description:**

**RubberCoat-Spray Grade** is well known in the roofing world. The product can be used as a waterproofing layer on new and old roofs. Liquid Rubber can be applied on top of almost every existing roofing products. This is a very easy way of renovating because there is no need to remove the old system which could save up a lot of money. Besides that, the seamless system of Liquid Rubber very strong and flexible which ensures a durable renovation.

In this project, the existing steel roof was leaking on several spots. After cleaning the entire roof, **RubberCoat-Spray Grade** was sprayed on at 80 mils (2mm) thickness.

This seamless roofing system ensures a durable waterproof roof system.
